	Swamped			0.010	-0.04	8

**Table D-5:2 Sub-Table for Maritime Life Rafts with Deep Ballast Systems and Canopies (kt)**

**Notes:**

1. These tables are adapted from Allen and Plourde 1999 Review of Leeway: Field Experiments and Implementation. USCG Research and Development Centre Report No CG-D-08-99.
2. Prior to the publication of the data the USCG Research and Development Centre made the decision that the only data published would be data that was based on actual results derived from documented research and observation during controlled field experiments. However it has been recognised that some anomalies exist in the data pertaining to maritime life rafts with no ballast systems. There had been significant time between the initial research done by Hufford and Broida in 1974 and later research by Nash and Willcox in 1991. Also it is probable that the make of life raft used for the experiments may no longer be in use.
3. SMCs should evaluate the calculated results obtained from using the tables with actual known conditions and adjust leeway values as appropriate.

### Taxonomy Class Definitions/Descriptions

The following section provides information about each of the leeway drift objects in Table D-5:1. For each description, the target characteristics are summarised and pictures are provided where available. These target descriptions are in no way meant to be all-inclusive. They are intended to assist a search planner in target identification. Proper identification will make the application of more specific leeway values possible. Some categories in Table D-5:1 do not require further explanation and therefore descriptions/pictures are not included. The SAR planner should also be reminded that any classification system will have overlap between some categories. In these cases, a decision must be made about the most probable situation.

- a) Person-in-Water (PIW)
- b) Persons in the water including persons without any floatation, and those with a throwable cushion, with a PFD, in an anti-exposure suit and in survival/immersion suits
- i) Vertical

Generally requires a conscious and active PIW to maintain this position. PIWs wearing a sport/work vest, anti-exposure suit, or float coat or having no floatation must actively maintain a vertical position in the water or become victims in the horizontal position.

- ii) Sitting

### Appendices

---

The classic foetal position with legs drawn up and arms huddled across the PFD. This is the preferred position a conscious or unconscious person assumes, especially in cold water, when wearing offshore lifejackets, horse-collar lifejackets, or inflatable vests. A conscious PIW hanging onto a throwable device will also assume the sitting position until he become unconscious at which time he become a victim.

iii) Horizontal

Three separate configurations place the PIW in a horizontal position. A conscious or unconscious PIW wearing a survival suit will float flat on his back. A PIW in scuba gear, with an inflated buoyancy vest, will float in a semi-reclined position. The classic floating position of a victim is floating face down in the water.

c) Maritime Survival Craft

This section includes life rafts, lifeboats, and life capsules as illustrated at Figure D-5:2. It does not include dinghies or inflatable boats that may be carried for the same purpose.

i) Maritime Life Rafts

If there is any question about what type of life raft a vessel may carry, a phone call to life raft repair and repackaging facilities close to the homeport of the distressed vessel may provide ballast, canopy, size, and drogue information.

ii) Shallow Ballast

Consists of a series of fabric pockets generally four (4) inches in diameter and less than six inches in depth.

iii) Deep Ballast

Consist of large fabric bags, from three (3)–seven (7) on the raft, that are at least 1'x 2' x 2'.

d) Other Maritime Survival Craft

i) Life Capsule

Fully enclosed crafts commonly used on large merchant and military vessels.

e) Aviation Life Rafts

Fall basically into two groups, life rafts and slide rafts. Aviation life rafts are similar to marine life rafts, but are usually made from lighter materials.

i) Evacuation/Slide

Slide rafts are specifically designed devices intended to ease evacuation from an aircraft. They mount to doorframes or near wing emergency exits and are cut loose from the airframe once fully loaded.

f) Person-Powered Craft

This description includes all forms of rowed or paddled boats including rowboats, inflatable boats without motors, canoes, kayaks, stand up paddle boards, surfboards and windsurfers.

For examples, see Figure D-5:3.

f) Mono-hull Sailing Vessel

It is assumed that all targets in this category are adrift; therefore sails are down or missing and the crew is unable to manoeuvre the vessel at all. A class of small to medium sized sailing vessels generally less than 20 ft and never more than 30 ft in length, they are typically designed for a single purpose such as racing or day sailing.

i) Full Keel

---

Small to medium sized sailboats whose keel runs the full length or nearly the full length of the hull. While the forward portion of the keel is modified or eliminated on some full keel sailboats, the keel on all full keel sailboats extends aft to the rudder. This is an old hull design and is not commonly used in new hull construction due to the relatively slow sailing speeds of this hull design.

ii) Fin Keel

Small to medium sized sailboats with permanent keel skegs that do not extend aft to the rudder.

g) Skiffs

Open boats less than 20 ft long that use an outboard motor as the primary source of propulsion. Some have characteristics identical to rowed boats with the exception that an outboard motor has been attached to the stern. This group includes, but is not limited to, tenders for larger vessels, bass boats, hunting boats, Jon boats, and a large category of utility boats. Skiffs are usually found on lakes and rivers, but are also common in the calm waters of many bays and rivers that provide access to the open ocean.

h) Personal Water Craft

Include a number of different designs for one or more persons. Generally there are stand up models and ride on models. Some craft marketed as PWC closely resemble small sport boats. Most PWC's have water jet propulsion. No leeway drift experiments have yet been performed on PWC's and they do not appear within Table D-5-1. Leeway category choice should be based on number of passengers/loading, size of PWC (draft, length, freeboard) of PWC. These factors may be comparable (not exactly) to several other leeway targets.

i) Sport Boats

Includes pleasure craft from 15 to 28 feet long with beamwidths from roughly 6 to 9 feet.

They include metal, fibreglass, and wood vessels with a V, modified-V, or deep-V hull form. Sport boats can be outfitted with inboard, outboard, or I/O propulsion. This category includes side console (closed bow and bow riders) and cuddy cabin boats. (Figure D-5:8)

j) Sport Fisher

Include pleasure and commercial craft from 17 to approximately 100 feet long with beam widths up to 24 ft. The majority are between 30 and 50 ft long, with beam widths between 10 and 15 ft. This class includes both semi-displacement and planning hull forms that can be outfitted with inboard, outboard, or I/O propulsion. This category includes boats with simple centre console or walk-round cabin. Convertibles are sport fishers with a walk around cabin and flying bridge. Convertibles designed for offshore fishing may also have a spotting tower. Many convertibles provide extended cruising capabilities similar to sport cruisers, but their after deck design provides a larger open area to work fishing gear. Some of these vessels can also be found in the cruiser or motor yacht categories. (Figure D-5:9)

k) Multi-hulled vessels

Multi-hulled vessels; these vessels differ from monohulls in that they have either two similar sized parallel hulls or a larger centre hull with two smaller ones on either beam. These vessels range in size from small hobby vessels of 4-5m in length to ferries and tourist vessels. All but the smallest have living quarters in the hulls and possible on the deck that joins them. They can be sail or motor driven, or a combination of both. There is no current separate category in the leeway tables for vessels of this style. (Figure D-5:10)

l) Commercial Fishing Vessels

Include vessels from 45 to 100 feet long designed for fishing or shell fishing in coastal and ocean waters. They include side and stern trawling rigs, long liners, bottom dragging rigs, and purse seiners. Pole fishers are simply modified use of a sport fisher or sport cruiser and should be treated as such. Commercial fishers can be working alone, as paired vessels, or can be the mother ship to a group of

smaller fishing skiffs. These vessels have different design features based on their purpose, but all have some form of deckhouse and an open area from which nets can lines are worked. A deck winch and boom system is commonly used to handle nets or lines. (Figure D-5:11)

m) Coastal Freighter

Include a wide range of commercial shipping platforms up to 100 feet in length. These vessels transfer cargo from one port to another, and shipping agents can provide estimated voyage schedules. Coastal freighters include vessels with a deckhouse on the forecastle, a midships deckhouse (common to cargo vessels), and an aft deckhouse (common to tankers and container ships). Leeway of these vessels will of course not only vary with respect to deckhouse location; it will also be greatly affected by loading, amount, and type of cargo. (Figure D-5:12)

n) Boating Debris

Includes any debris that can be expected from a boat that is sinking and/or breaking up. It may include paper or plastic containers, bedding or clothing, and a variety of fragmented boat sections.

i) Fishing Debris

Debris typical to a fishing vessel such as lifejacket, life ring, fishing float balls, a fishing box lid, or wooden boards

ii) Bait/Wharf Box

Commercially available 1.1 X 1.5 metre plastic box used by commercial fisherman for holding ice and/or fish. Although not it's intended use, it could also serve as a floatation/life raft by persons in distress.

- Lightly loaded. Approximately 200 lbs. (simulation of one person)
- Fully loaded. Approximately 800 lbs. (simulation of four persons)

**Table D-5:3 Uncorrected Visual Sweep Width for Vessels and Small Boats (NM)**

**Note:** A sailboat is only a sailboat if the sails are up. If the sails are down, the craft should be classed as a powerboat.

### Weather Correction Factors for all Types of Search Facilities

Weather: Winds km/h (kt) or seas m (ft)	Search Object	
	Person in water, raft or boat <10m (33ft)	Other search objects
Winds <28km/h (<15kts) or seas 0-1m (0-3ft)	1.0	1.0
Winds 28-46km/h (15-25kts) or seas 1-1.5m (3-5ft)	0.5	0.8
Winds >46km/h (>25kts) or seas >1.5m (>5ft)	0.25	0.5

**Table D-5:4 Weather Correction Factors for all Types of Search Facilities**

**Note:** This table differs from IAMSAR for other search objects in winds greater than 15kts. This is based on previous values used and observations of the reported effects of high winds on sweep width values in actual SAR incidents.

### Uncorrected Visual Sweep Widths for Merchant Ships (NM)

Height of eye correlates to bridge of a merchant ship	Meteorological visibility [km]				
	5 km	10 km	20 km	30 km	40 km
Search Object					
Person in water	0.4	0.5	0.6	0.7	0.7
4-person life raft	2.3	3.2	4.2	4.9	5.5
6-person life raft	2.5	3.6	5.0	6.2	6.9
15-person life raft	2.6	4.0	5.1	6.4	7.3
25-person life raft	2.7	4.2	5.2	6.5	7.5
Boat <5m (17ft)	1.1	1.4	1.9	2.1	2.3
Boat <7m (23ft)	2.0	2.9	4.3	5.2	5.8
Boat <12m (40ft)	2.8	4.5	7.6	9.4	11.6
Boat <24m (79ft)	3.2	5.6	10.7	14.7	18.1

**Table D-5:5 Uncorrected Visual Sweep Widths for Merchant Ships (NM)**

## Appendices

### Uncorrected Sweep Widths for Fixed-Wing Aircraft (NM) at 500 ft and 1000 ft

**Table D-5:6 (1) Uncorrected Sweep Widths for Fixed-Wing Aircraft (NM) at 500 ft and 1000 ft**

**Notes:**

- For search altitudes of 500 feet only, the sweep width values for a person in water may be multiplied by four (4), if it is known that the person is wearing a flotation device.
- A sailboat is only a sailboat if the sails are up. If the sails are down, the craft should be classed as a powerboat.

### Weather Correction Factors for all Types of Search Facilities

Weather: Winds km/h (kt) or seas m (ft)	Search Object	
	Person in water, raft or boat <10m (33ft)	Other search objects
Winds <28km/h (<15kts) or seas 0-1m (0-3ft)	1.0	1.0
Winds 28-46km/h (15-25kts) or seas 1-1.5m (3-5ft)	0.5	0.8
Winds >46km/h (>25kts) or seas >1.5m (>5ft)	0.25	0.5

**Table D-5:4 Weather Correction Factors for all Types of Search Facilities**

---

**Note:** This table differs from IAMSAR for other search objects in winds greater than 15kts. This is based on previous values used and observations of the reported effects of high winds on sweep width values in actual SAR incidents.

### Uncorrected Sweep Widths for Fixed-Wing Aircraft (NM) at 1500 ft and 2000 ft

Search Object [Metres (ft)]	Altitude 1500 ft						Altitude 2000 ft
